

ENVIRONMENTAL POLICY

We are aware of the environmental impact that our business activity causes and, therefore, the importance of its protection in order to maintain our region's socio-cultural, environmental and economical balance. We are aware of the footprint that our actions leave in our environment and we assume our responsibility with future generations.

We believe it is fundamental to be able to offer our clients an authentic destination where they can enjoy an environment which is respected and well taken care of. In our opinion, sustainability is the balance between environmental protection, integration into the tourist destination and the use of local products and services. All of this is essential for economic success and to maintain the levels of quality expected by the client.

We comply with all environmental laws and regulations and we integrate related objectives in all company departments, making all of our groups of interest participants in it.

Our objectives are:

Preserving natural resources. Reducing contamination and preventing water shortages, especially in the Canary Islands, should be a priority for all companies carrying out business activities here.

Maintaining and optimising the level of energy and water savings.

Carrying out a **continuous study on energy saving** in order to incorporate the most innovative measures to our establishments.

Obtaining a **sustainability certificate** for all our hotels.

Reducing the use of paper. We have a document-management project whose objective is to considerably reduce the use of paper.

Contributing to the **sustainable development** of our municipality. The renovation of our establishments is key to maintaining a high-quality tourist experience for the future.
